Re: WC Docket No.: 02-384

Application by Verizon Maryland, Verizon Washington, DC and Verizon West Virginia for Authorization Under Section 271 of the Communications Act To Provide In-Region, InterLATA Services in States of Maryland, Washington, DC and West Virginia

Dear Ms. Dortch:

On behalf of the 300,000 members of the National Grange, the nation's oldest general farm and rural public interest organization, I am pleased to submit the following comments in support of Verizon's application to provide in-region, interlata services in the States of Maryland, West Virginia and Washington DC. The National Grange firmly believes that increased competition in the long distance market is essential for the rollout of necessary and advanced telecommunications services that will benefit rural communities in these states.

Washington DC is not considered a rural community. However, the National Grange was founded in Washington DC and the oldest local community chapter of the Grange, Potomac Grange #1, is still located and still meets in Washington DC. Potomac Grange represents 65 local Grange members who live and work in the Washington DC area. Potomac Grange #1 joins the National Grange in support of Verizon's application to provide in-region, interlata services in the States of Maryland, West Virginia and Washington DC.

A majority of our National Grange members reside in rural America. For our members, basic telecommunications services are vital to their daily lives. In many rural communities in Maryland and West Virginia, essential communications for rural residents are only available through the use of toll and long distance calls. This places an extra financial burden on rural Americans because rural residents primarily live in remote geographic areas. Rural Americans often depend on long distance telephone service to maintain contact with family members and friends, as well as gain access to necessary public and commercial services such as law enforcement, local government, hospitals, attorneys and doctor's office. However, most rural areas are currently served by a single service provider. Verizon's entry as a large and new

competitor would drive down the basic rates that rural consumers would have to pay for long distance service.

Approximately 25 percent of Americans live in rural areas. Verizon's entry into the long distance markets in Maryland, West Virginia and Washington DC will help spur an investment in broadband deployment that would allow families in rural communities to receive the same technological opportunities as their urban counterparts. Provider choice and lower-cost access to the Internet over basic phone lines is important to the future of rural America. Rural consumers in Maryland and West Virginia often have to use long distance to access the Internet, thus incurring both Internet Service Provider (ISP) and long distance charges. Access to the Internet and other advanced technologies can expand life-long learning opportunities, increase the quality of health care, enhance public safety, promote more efficient and environmentally friendly farm technology and make services more affordable to rural communities.

We believe the application by Verizon to provide long distance service in Maryland, West Virginia and Washington DC will serve the interest of rural consumers. The National Grange and Potomac Grange #1 both look forward to the FCC's approval of this application so consumers and rural populations in these states can enjoy the benefits of a more robust and competitive telecommunications market.

Sincerely,

Leroy Watson
